"THE PROFESSIONAL ONE"

The **EP suction arm** is a self-supporting suction arm capable of removing smoke, odors, vapors, gases, dust and mist at the source, as well as any other pollutants originated in work-rooms. From the wide range of the AIRBRAVO Arms the EP is hereby submitted to the most exacting designers for applications in which a reliable, easy to handle and high quality product is required.

AIRBRAVOTM EP

External Quadruple-Pantograph Suction Arms

- Four-Pantograph (patented) supporting structure external to the suction arm.
- Totally spring balanced.
- No joint or friction blocking the intake flow.
- Maximum ease of handling and stability in time.

MODELS

The AIRBRAVO EP suction arms are available in the Industry and the Laboratory versions (see specific Catalogue). In the Industry series, the arms are available in models featuring pipe diameters of 125, 160, 200 and 250mm. and 2, 3, and 4 meters of nominal straddle, or even 8 m. if an EPB series Jib Extension is used (See specific Catalogue).

ACCESSORIES AND SPECIAL VERSIONS

A wide range of accessories and special version arms are available in order to make the EP suction arms suitable for many different requirements.

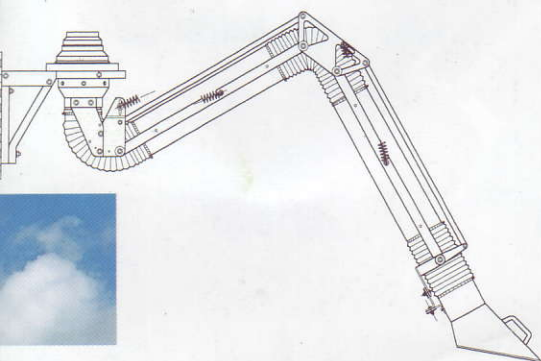

- Stainless steel versions;
- Polypropylene (PP) versions;
- Anti-spark Eex-d versions;
- Versions for the food industry;
- Versions for medium temperatures (200°C);

- Versions for high temperatures (300°C).

STRUCTURAL SPECIFICATIONS

The exhaust rigid pipes are supported by a structural aluminum quadruple-pantograph structure. Balancing is provided by 4 or more steel spring and 18 or more special charged polymer friction points with washers and self-locking nuts. The rigid pipes and the truncated cone-shaped with elliptic base suction hood are made of galvanized and kiln-enameled steel plate. The flexible hoses are vacuum values of 1.6 kPa (at a temperature of 20°C). The basis rests onto autolubricant plastic matter washers, and can rotate over 360°. The arm can be easily transformed from the hanging to the trolley-mounted versions by the user himself.

SUCTION UNITS

Suction Units equipped according to specifications as in the table below are also available. They include the arm, the bracket, and the exhaustor with a pressure of 1.7kPa. Units featuring different pressure values or made of different materials are also available on request.
